What is a projection model?

Acquisition and Projection

T. Maugey

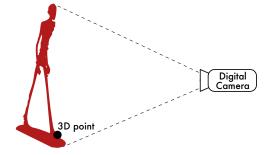

Projection Model

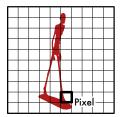

Perspective Projection Mode

Omnidirectiona projection

Reference

Find the relationship between a point in the 3D world and the corresponding pixel in an image.

Photodetector

Acquisition and Projection

T. Maugey

Projection Model

Perspective Projection Mode

Omnidirectional projection

Reference

Sensor that converts a certain electromagnetic activity into a electrical current.

Usually a **semiconductor** that transforms a light photons into electrons only for a certain band of energy. The number of electrons collected is proportional to the quantity of light that is received.

One photodiode per Red/Green/Blue channel:

- CCD: charge-coupled device
- CMOS: complementary metal-oxide-semiconductor

One photodiode for all Red/Green/Blue channels:

Feoven

From photodiode to Pixel

Acquisition and Projection

T. Maugey

Projection Model

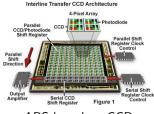

Perspective Projection Model

Omnidirectional projection

Reference

A Pixel is a picture element

Active-Pixel Sensor (APS) associate to each pixel, one (or several) photodetector and an active amplifier.

APS based on CCD

How to capture the light ?

Acquisition and Projection

T. Maugey

Projection Model

Perspective Projection Mode

Omnidirectiona projection

Reference

The issue is not only to capture the light intensity, but also the light direction $% \left({{{\left[{{{\left[{{{c_{1}}} \right]}} \right]}_{i}}}} \right)$

Aperture and focal length

Acquisition and Projection

T. Maugey

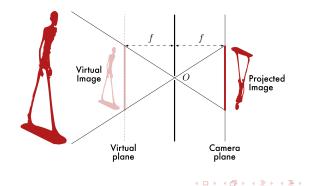

Projection Model

Perspective Projection Model

Omnidirectiona projection

Reference

- The **aperture** is the hole (pinhole) center *O* of the camera through which the rays are passing
- The **focal length** *f* is the distance between the aperture and the camera plane

Aperture's size

Acquisition and Projection

T. Maugey

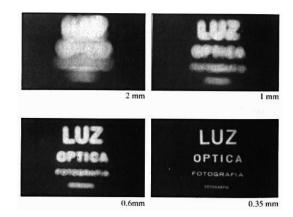

Projection Mode

Perspective Projection Model

Omnidirectiona projection

Reference

It controls the trade-off between the *quantity of light* and the *uniqueness of the ray direction* per sensor.

In the following, we consider that it is a point.

[Wikipedia]

Focal length

Acquisition and Projection

T. Maugey

Projection Mode

Perspective Projection Model

Omnidirectional projection

Reference

It controls the angle of view of the camera (and thus the zoom).

Camera objectives:

- Small *f*: wide angle
- High *f*: zoom

 $f=28 \,\,\mathrm{mm}$

 $f = 50 \ \mathrm{mm}$

f = 70 mm

・ロト ・ 日 ト ・ ヨ ト ・ ヨ ト ・

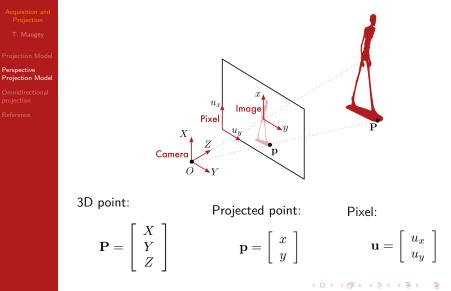

f = 210 mm

[Wikipedia]

Three coordinate systems

From Camera to Image coordinates

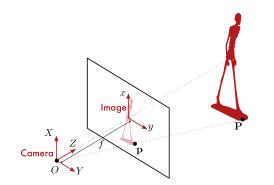

T. Maugey

Projection Mode

Perspective Projection Model

Omnidirectiona projection

Reference

The relationship between ${\bf P}$ and ${\bf p}$ is given by:

 $\begin{cases} x = ?\\ y = ? \end{cases}$

イロト イポト イヨト イヨト ヨー のへで 15/39

From Camera to Image coordinates

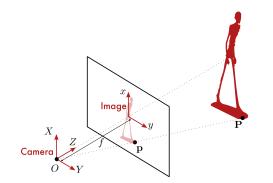

T. Maugey

Projection Mode

Perspective Projection Model

Omnidirectiona projection

Reference

The relationship between ${\bf P}$ and ${\bf p}$ is given by:

 $\begin{cases} x = f \frac{X}{Z} \\ y = f \frac{Y}{Z} \end{cases}$

<ロト < 部ト < 言ト < 言ト こ の へ () 15 / 39

From Image to Pixel coordinates

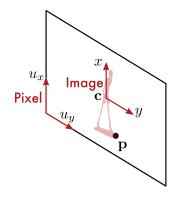

T. Maugey

Projection Mode

Perspective Projection Model

Omnidirection: projection

Reference

Camera center:

Resolution (pixel.mm⁻¹):

Pixel coordinates:

イロト イヨト イヨト イヨト

$$\mathbf{c} = \begin{bmatrix} x_0 \\ y_0 \end{bmatrix} \qquad \qquad \mathbf{k} = \begin{bmatrix} k_x \\ k_y \end{bmatrix} \qquad \qquad \begin{cases} u_x = k_x(x+x_0) \\ u_y = k_y(y+y_0) \end{cases}$$

э

Homogeneous Coordinates

Acquisition and Projection

T. Maugey

Projection Mode

Perspective Projection Model

Omnidirectiona projection

Reference

Represent a n-dimensional coordinate with an n+1-dimension vector:

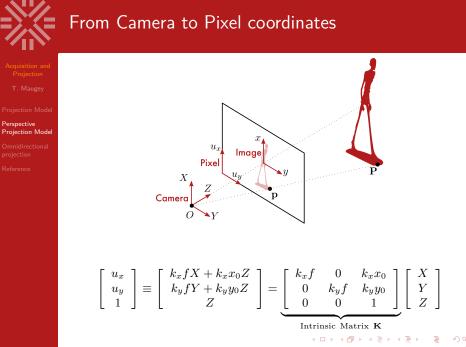

$$\begin{bmatrix} v_1 \\ \vdots \\ v_n \end{bmatrix} \rightarrow \begin{bmatrix} v_1 \\ \vdots \\ v_n \\ 1 \end{bmatrix}$$

Homogeneous divide:

$$\begin{bmatrix} v_1 \\ \vdots \\ v_n \\ w \end{bmatrix} \rightarrow \begin{bmatrix} v_1/w \\ \vdots \\ v_n/w \\ 1 \end{bmatrix}$$

Two vectors are said **homogeneous** if their homogeneous divide is equal, *e.g.*,

$$\begin{bmatrix} 2\\3\\1 \end{bmatrix} \equiv \begin{bmatrix} 4\\6\\2 \end{bmatrix} \equiv \begin{bmatrix} 6\\9\\3\\0 \end{bmatrix}_{(2)} = (2) = (2)$$

Intrinsic matrix

Acquisition and Projection

T. Maugey

Projection Mode

Perspective Projection Model

Omnidirectiona projection

Reference

The intrinsic matrix is given by: $\begin{bmatrix} k_x f & s & k \end{bmatrix}$

$$\mathbf{K} = \begin{bmatrix} k_x f & s & k_x x_0 \\ 0 & k_y f & k_y y_0 \\ 0 & 0 & 1 \end{bmatrix}$$

п

with

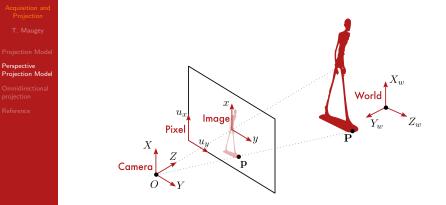

- s: skew parameter (in pixels)
- (x_0, y_0) : principal point coordinates (in mm)
- f : focal length (in mm)
- k_x, k_y : vertical, horizontal resolution (in pixel.mm⁻¹)

Play with it: http://ksimek.github.io/2013/08/13/intrinsic/

Perspective

World coordinates

 $\left|\begin{array}{c} X_w \\ Y_w \\ Z_w \end{array}\right|$ The point \mathbf{P} might be expressed in the world coordinate system: イロト イヨト イヨト イヨト э

Change of coordinate system

Acquisition and Projection

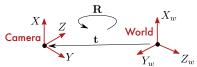

T. Maugey

Projection Model

Perspective Projection Model

Omnidirectional projection

Reference

If (α, β, γ) are the euler angles of the rotation around respectively the (X_w, Y_w, Z_w) axis, the rotation matrix is given by:

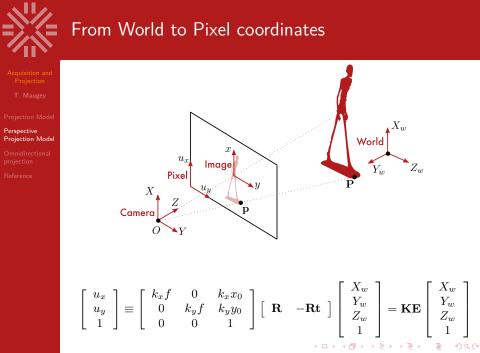

| | $\cos \gamma$ | $-\sin\gamma$ | 0] [| $\cos \beta$ | 0 | $\sin \beta$ | 1 | 0 | $\begin{array}{c} 0 \\ -\sin \alpha \\ \cos \alpha \end{array}$ | ٦ |
|----------------|---------------|---------------|-------|--------------|---|---------------|-----|---------------|---|---|
| $\mathbf{R} =$ | $\sin \gamma$ | $\cos \gamma$ | 0 | 0 | 1 | 0 | 0 | $\cos \alpha$ | $-\sin \alpha$ | |
| | 0 | 0 | 1] [| $-\sin\beta$ | 0 | $\cos \gamma$ | L 0 | $\sin \alpha$ | $\cos \alpha$ | 1 |

If the camera center O coordinates expressed in the world system are given by \mathbf{t} , the coordinate system change is expressed as:

$$\begin{bmatrix} X\\Y\\Z \end{bmatrix} = \mathbf{R} \left(\begin{bmatrix} X_w\\Y_w\\Z_w \end{bmatrix} - \mathbf{t} \right) = \underbrace{\begin{bmatrix} \mathbf{R} & -\mathbf{Rt} \end{bmatrix}}_{\text{Extrinsic Matrix } \mathbf{E}} \begin{bmatrix} X_w\\Y_w\\Z_w \end{bmatrix}$$

Play with it: http://ksimek.github.io/2012/08/22/extrinsic/

What is an omnidirectional image?

Acquisition and Projection

T. Maugey

Projection Model

Perspective Projection Model

Omnidirectional projection

Reference

Definition

An image that represents the light activity arriving at a point (the image center) from every direction (360° field of view).

Applications:

• Virtual reality Head-Mounted Display (HDM)

- Free viewpoint Television More than 1 million videos uploaded on Youtube in 1 year
- Robotics

Omnidirectional capture?

Acquisition and Projection

T. Maugey

Projection Mode

Perspective Projection Model

Omnidirectional projection

Reference

The main issue is to cover a wide angle of view (360°)

• Multiple perspective projections by several small degree of view cameras (180° or 360° field of view)

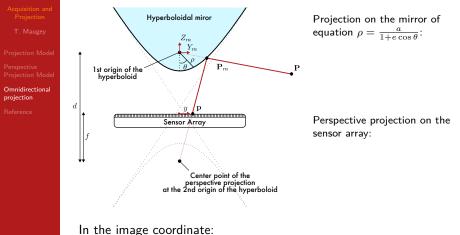

- A curved mirror + one single perspective camera (180° field of view)
- Fish-eye lenses (180° field of view)

In the following, we present the two last ones.

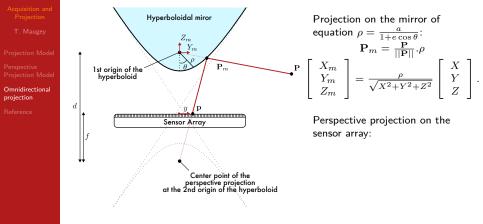

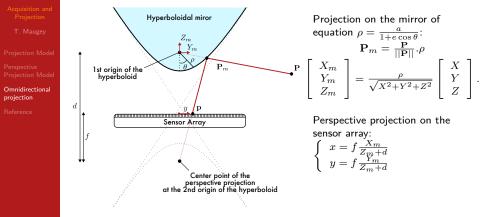

29 / 39

Let us take a line of equation

$$\begin{cases} X = a_x t + X_0 \\ Y = a_y t + Y_0 \\ Z = a_z t + Z_0 \end{cases}$$

If
$$k_x = k_y = f = 1$$
 and $x_0 = y_0 = 0$. We can write

$$\begin{bmatrix} u_x \\ u_y \end{bmatrix} = \begin{bmatrix} \frac{a_x t + X_0}{\xi \sqrt{(a_x t + X_0)^2 + (a_y t + Y_0)^2 + (a_z t + Z_0)^2} + a_z t + Z_0} \\ \frac{a_y t + Y_0}{\xi \sqrt{(a_x t + X_0)^2 + (a_y t + Y_0)^2 + (a_z t + Z_0)^2} + a_z t + Z_0} \end{bmatrix}$$

The projection of lines are curves in the spherical image.

The pixels of the spherical image are placed on the sphere $\mathbf{P}_s = [x,y,z]^\top$

The viewport is oriented towards a direction whose rotation matrix is given by \mathbf{R} .

The center of the viewport is at (c_u, c_v) , with corresponding resolutions (k_u, k_v) .

The projection of \mathbf{P}_s on the viewport is:

[De Simone, Francesca et al. "Geometry-driven quantization for omnidirectional image coding." PCS (2016).]
